1. **BOIL** *Bacteria + Viruses + Parasites.*

2. **DISINFECT** *Bacteria + Viruses.*

3. **FILTER** *Parasites.*

4. BOILING, DISINFECTING AND FILTERING
ARE NOT SUFFICIENT TO REMOVE

Harmful Chemicals Or Toxins

So What Else Should People of African Descent Know About Water?

**For Long Term
Storage
Best Practices
Advice
And Tips!**

It is recommended by experts to have one gallon of water a day for two weeks in your storage plan.

- A 15 Gallon Water Barrel provides one person with this minimum amount.
- A 30 Gallon Water Barrel provides this minimum amount for two.
- A 55 Gallon Water Barrel the minimum for four people.
- A 160 gallon tank stores the minimum amount for about eleven people

WATER BARRELS SHOULD BE MANUFACTURED WITH PRIME RESIN AND FDA-APPROVED, HIGH-MOLECULAR-WEIGHT, HIGH-DENSITY POLYETHYLENE.

PURCHASING A QUALITY WATER BARREL IS A WISE INVESTMENT.

Water Storage Containers

IT IS NOT SAFE TO STORE WATER FOR LONG TERM STORAGE IN "MILK CONTAINERS"

WATER STORAGE TIPS!

You'll need to treat and access your water easily.

- ▶ What accessories will enable you to clean and pump your water? Get a food-grade pump or siphon and some water purification devices or tablets. These are items we consider essential: Either germicidal or chlorine dioxide are safe when used as directed. Follow the directions carefully.

- ▶ To prevent accidental absorption of concrete fumes or trapped stagnant odors.

Do not store your filled water barrel directly on cement. It is wise to use an insulating barrier, such as untreated wood, between the barrel and cement.
